

For Immediate Release
August 1, 2008

ZedaSoft delivers the first RGS DemoStation Kiosk to BAE Systems North America in record time for the Farnborough Air Show.

(Fort Worth, Texas – August 1, 2008) ZedaSoft, Inc., a simulation and visualization software company announced the delivery of the first Remote Guardian System (RGS) DemoStation Kiosk (DSK) to BAE Systems North America. The kiosk demonstrates the RGS capabilities as they would conceivably be installed on a CH-47D helicopter. ZedaSoft was able to develop the software and integrate the RGS Kiosk for delivery to the Farnborough Air Show for BAE Systems in four weeks. This rapid development was made possible through the use of ZedaSoft's patent pending CBA® for Simulation, which is an object-sharing Java based simulation framework.

This version of the RGS demonstrator consisted of a CH-47D model with the RGS sensor ball and mini gun placed in the forward and aft hell-hole locations respectively. The sensor and gun turrets are fully articulated and driven by the user's controller. The demonstration scenario included the CH-47D helicopter being under heavy gun fire from insurgents to demonstrate the RGS' unique defense capabilities.

ZedaSoft's DemoStation Kiosk (DSK) was the perfect solution for BAE due to its portability and network ready configuration. The DSK can be deployed and used in just about any location or venue, and uses COTS computers, displays and controls to provide a very cost effective and quick delivery solution.

About ZedaSoft

ZedaSoft, Inc. develops innovative products for the simulation and visualization industry. Its customers include Lockheed Martin, The Boeing Company, the Federal Aviation Administration, U.S. Air Force and other defense, government, and commercial organizations. The main goal at ZedaSoft is to strike the balance between realistic simulation and cost-effective deployed solutions utilizing modern simulation architecture.
